

FIE Wireless Networks

How to get the best performance

Dr Imad Al-Kadhim
Chief IT Officer

FIE Wireless Network Names & Types

- FIE-A
5GHz

Very fast internet speed over 100 Mbps bandwidth
No interference with other devices or kitchen appliances

Watch your device wireless signal

Make sure that you are near the wireless access point and watch your signal strength

- **FIE–A**

Not suitable for internet use and browsing (**Seek and approach the wireless access point**).

Good for internet use, browsing, texting and video conferencing (**You may get better performance if you approach the wireless access point**).

Excellent signal strength. You have the maximum bandwidth and performance. You can run any internet service and application.

Other Tips

- Disable the following on your devices that conflict with the Wi-Fi or make the internet performance very slow:
 - Virtual Private Network (VPN)
 - Bluetooth / wireless headphones

Questions / Issues

- If you have any internet or wireless issue please submit a [maintenance form ticket](#)
